

# ASSIGNMENT-2

**TEAM ID: PNT2022TMID12702**

## **QUESTION:**

Build a python code, Assume u get temperature and humidity values (generated with a random function to a variable) and write a condition to detect an alarm in case of high temperature continuously.

## **CODE:**

```
import random
import time
while True:
    temperature = random.randint(1,100)
    humidity = random.randint(1,100)
    print("Temperature: ", temperature)
    print("Humidity: ", humidity)
    if temperature >= 60 and (30 < humidity < 60):
        print("Alarm ON!")
    else:
        print("Alarm OFF!")
        time.sleep(2)
```

```
main.py
1 import random
2 import time
3
4 while True:
5     temperature = random.randint(1,100)
6     humidity = random.randint(1,100)
7     print("Temperature: ", temperature)
8     print("Humidity: ", humidity)
9     if temperature >= 60 and (30 < humidity < 60):
10         print("Alarm ON!")
11
12     else:
13         print("Alarm OFF!")
14
15     time.sleep(2)
16
17
```

## OUTPUT:

```
main.py
1 import random
2 import time
3
4 while True:
5     temperature = random.randint(1,100)
6     humidity = random.randint(1,100)
7     print("Temperature: ", temperature)
8     print("Humidity: ", humidity)
9     if temperature >= 60 and (30 < humidity < 60):
10         print("Alarm ON!")
11
12     else:
13         print("Alarm OFF!")
14
15     time.sleep(2)
16
```

input

```
Humidity: 61
Alarm OFF!
Temperature: 56
Humidity: 15
Alarm OFF!
Temperature: 88
Humidity: 93
Alarm ON!
Temperature: 25
Humidity: 30
Alarm OFF!
Temperature: 24
Humidity: 67
Alarm OFF!
```
